More detailed moon phase information can be found on our website where key phases are calculated to the nearest minute and are corrected for British Summer Time. The website also has a moon phase gadget on every page and that gives instantaneous values for age of the moon (from New), current state (Whether it is Waxing or Waning etc.) and also give the exact time of the next Full and New moons. To the best of our knowledge and ability, all times are calculated and given to the nearest minute for the Greenwich meridian. If you live in a different time zone you simply need to add or subtract the difference between GMT and your local time.
